Answer c Electron

MCQ 2 The mass number of an atom is the sum of a Protons only b Electrons only c Protons and electrons d Protons and neutrons  
Answer d Protons and neutrons

Remember that famous scientist Ernest Rutherford His gold foil experiment a brilliant display of experimental prowess revolutionized our understanding of atomic structure He fired alpha particles at a thin gold foil expecting them to pass straight through Instead some bounced back revealing the existence of a dense positively charged nucleus at the atoms heart This unexpected result much like a surprising twist in a gripping novel changed the course of scientific history

2 Chapter 2 Elements Compounds and Mixtures The Building Blocks of Everything Just as a chef uses different ingredients to create a delicious dish chemists use elements compounds and mixtures to build the world around us Elements are the pure substances the fundamental ingredients on the periodic table think of them as the basic spices in our chemical kitchen Compounds are formed when elements combine like a perfectly blended recipe creating something entirely new with properties different from its constituents Mixtures on the other hand are simply combinations of substances that retain their individual properties Imagine mixing sand and sugar you can still distinguish each component

MCQ 3 Which of the following is a compound a Air b Water c Sand d Oxygen  
Answer b Water  $\text{H}_2\text{O}$

MCQ 4 A mixture can be separated into its components by a Chemical reactions only b Physical methods only c Both chemical and physical methods

d Neither chemical nor physical methods Answer b Physical methods only Think of baking a cake Flour sugar eggs and butter are the elements ingredients When mixed and baked they form a compound the cake with completely new properties compared to the individual ingredients If you simply mix flour and sugar without baking it remains a mixture Chapter 3 Chemical Reactions The Dance of Atoms Chemical reactions are the dynamic heart of chemistry where atoms rearrange and form new substances They're like a lively dance where atoms break old bonds and forge new ones transforming matter into something new This transformation can be accompanied by observable changes like color change gas evolution or temperature alteration MCQ 5 Which of the following is an example of a chemical change a Melting ice b Burning wood c Dissolving sugar in water d Boiling water Answer b Burning wood MCQ 6 A chemical reaction that produces heat is called a Endothermic b Exothermic c Isothermic d Adiabatic 3 Answer b Exothermic The rusting of iron a slow and seemingly insignificant process is a prime example of a chemical reaction Iron combines with oxygen in the air to form iron oxide commonly known as rust This reaction though gradual profoundly alters the properties of iron making it weak and brittle Its a subtle reminder of the constant chemical transformations occurring around us Chapter 4 The Periodic Table A Map of the Elements The periodic table a seemingly complex arrangement of elements is actually a beautifully organized map of matter It reveals patterns and relationships between elements predicting their properties based on their position Its like a treasure map guiding us to understand the intricate connections between different elements MCQ 7 Elements in the same group of the periodic table have a Similar atomic masses b Similar chemical properties c Similar physical properties d The same number of protons Answer b Similar chemical properties MCQ 8 The most reactive metals are found in a Group 1 b Group 17 c Group 18 d Group 14 Answer a Group 1
